ACES
MOBILITY COALITION

The ACES Mobility Coalition

is proud to be a second-year partner of the Florida Automated Vehicles (FAV) Summit and this year's VIP Reception sponsor.

We're working to unlock the potential of shared autonomous mobility across America's transit systems — uniting public and private sector leaders who are advancing people-centered policy and innovation to create safer, smarter, and more connected communities.

About the ACES Mobility Coalition

The ACES Mobility Coalition is a public-sector-led organization that educates agencies, federal and state legislators, and the public about the benefits of shared autonomous mobility.

The ACES (Autonomous, Connected, Electric, Shared) ecosystem brings together vehicles, infrastructure, charging and related technologies to advance a safer, more accessible mobility future for all road users.

The Coalition works with stakeholders to increase awareness and lower barriers to deploying shared autonomous mobility solutions that address first- and last-mile transit issues and provide effective alternatives to driving, reducing single-occupancy vehicle trips and traffic congestion.

Founded in 2024, the Coalition's members include transit and transportation agencies, technology innovators, academics, manufacturers and like-minded organizations, all committed to advancing shared autonomous mobility that reduces emissions, supports American workforce growth through education and high-paying jobs, expands access to frequent public transportation, and improves lives nationwide.

Help shape the future of shared autonomous mobility.
